

CUEVO Lyrics

Time-synced song lyrics, straight into Resolume Arena over Spout

v0.11.0 · first public release

MIT licence · github.com/mochaaheree/cuevo-lyrics

The problem

02

Putting lyrics on a live screen usually means one of two bad options.

Pre-rendered video

Every song becomes a render job. Change the set list an hour before doors and you are re-exporting.

Type it live

Someone is typing into a text source while the band plays. It shows.

Presentation software

Built for slides, not for a VJ rig. Getting it into Resolume with real alpha is a fight.

CUEVO Lyrics does the third thing properly: a lyrics engine that speaks Resolume natively.

A desktop app that renders lyrics and hands them to Resolume as a Spout source with real transparency.

Search or write

Pull synced lyrics from LRCLIB, import .lrc, or time them yourself with a tap-to-timestamp editor.

Build the set

Order the songs, save the show, reopen it next week.

Style it once

Font, size, colour, outline, scroll behaviour, transitions. Save as a template.

Run the show

Play, pause, nudge the sync, blank the output. Keyboard, OSC, or MIDI.

How it works

04

- | | | |
|---|--|-------------------------------------|
| 1 | LRCLIB / local library / manual editor | where the words come from |
| 2 | LRC parser | lines plus timestamps |
| 3 | Show | the running order |
| 4 | Live control | play, pause, offset, blank |
| 5 | Renderer | multi-line scroll, transparent RGBA |
| 6 | Spout | Resolume: Sources > Spout |

Sync is manual by design. You press Play when the song starts and nudge it if it drifts. No audio listening, no beat detection, nothing to go wrong in front of an audience.

Maroon 5 - Maps - Maroon 5

71 lines

Program

PGM

1 Jireh | Elevation Worship - Elevatic

00:55.29

When I was at my worst down on my knees

2 Nakupenda - TXC, Davido, Shoda

00:57.82

And you said you had my back

3 Maroon 5 - Maps - Maroon 5

01:01.28

So I wonder, where were you?

4 Berkat KemurahanMu - NDC Wor

01:03.23

When all the roads you took came back to me

5 LANY - Super Far (Official Audio)

01:06.48

So I'm following the map that leads to you

6 Your Word - Hillsong Worship - H

01:10.15

The map that leads to you

01:12.13

Ain't nothing I can do

01:14.17

The map that leads to you

01:15.58

Following, following, following to you

01:17.15

The map that leads to you

01:19.66

Ain't nothing I can do

01:21.56

The map that leads to you

01:23.45

Following, following, following

01:25.46

I hear your voice in my sleep at night

01:28.72

Hard to resist temptation

01:33.29

'Cause something strange has come over me

01:36.63

Now, I can't get over you

01:40.45

No, I just can't get over you

01:44.54

I was there for you in your darkest times

01:48.38

I was there for you in your darkest night

01:52.43

But I wonder, where were you?

01:55.22

When I was at my worst down on my knees

01:57.74

And you said you had my back

02:02.10

So I wonder, where were you?

02:03.98

When all the roads you took came back to me

02:06.47

So I'm following the map that leads to you

02:10.12

The map that leads to you

02:12.14

Ain't nothing I can do

02:14.12

The map that leads to you

02:15.81

Following, following, following to you

02:17.59

The map that leads to you

02:20.11

Ain't nothing I can do

02:22.03

The map that leads to you

02:23.97

Oh, oh, oh, ah

02:26.35

Oh, oh, oh, ah

02:28.42

Ye, ye, ye, ah

02:30.32

Ah, ah, mmh, ah

02:32.18

Oh, I was there for you

02:34.59

Oh, in your darkest times

02:36.50

Oh, I was there for you

Live

Set list, the full lyric sheet, and a preview of exactly what Resolume is receiving. The strip reads ON AIR at 29.7 fps, measured, not decorative.

One search box

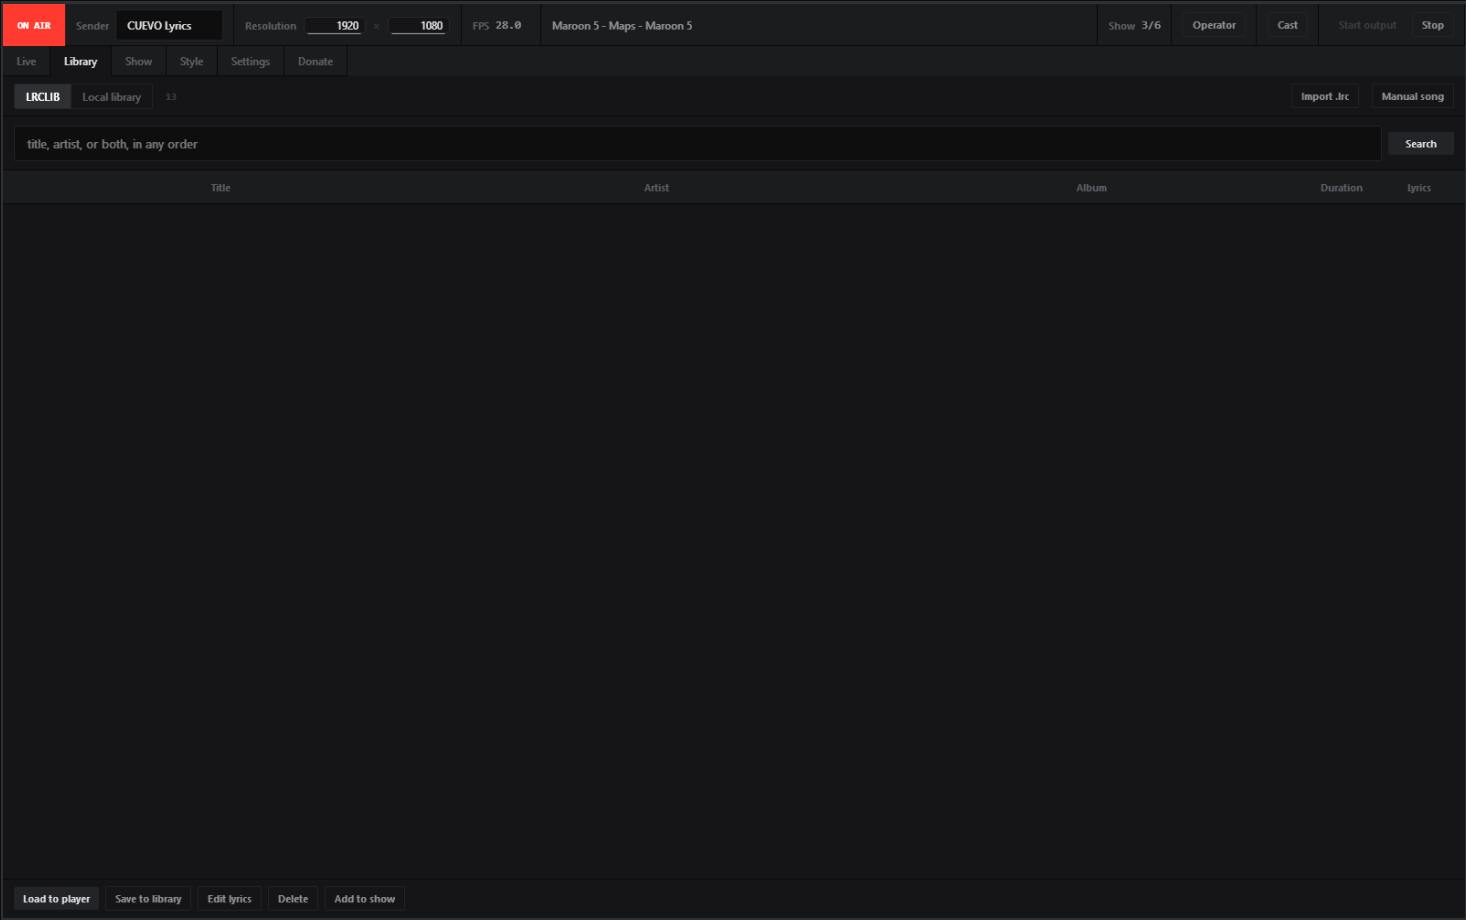

Title, artist, or both, in any order. It maps to LRCLIB's own query parameter.

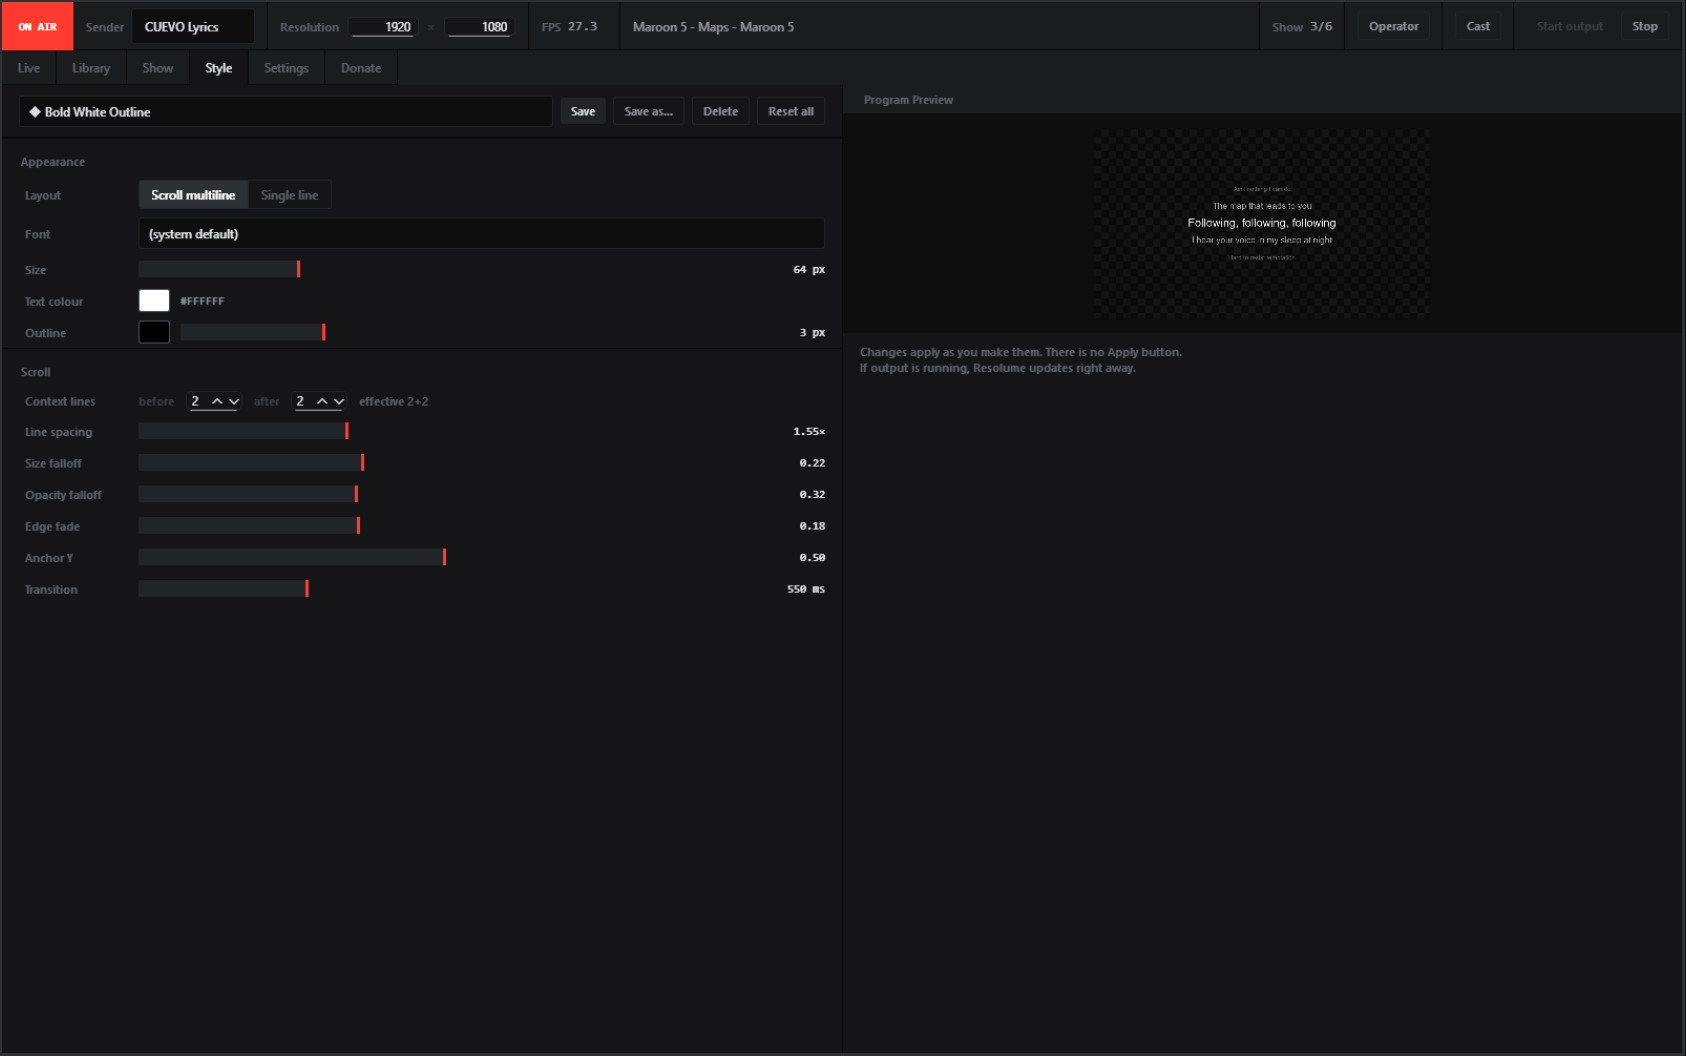

Works offline

Once a song is saved locally, LRCLIB being down does not stop the show.

Manual editor

Tap to timestamp, shift every line at once, export .lrc.

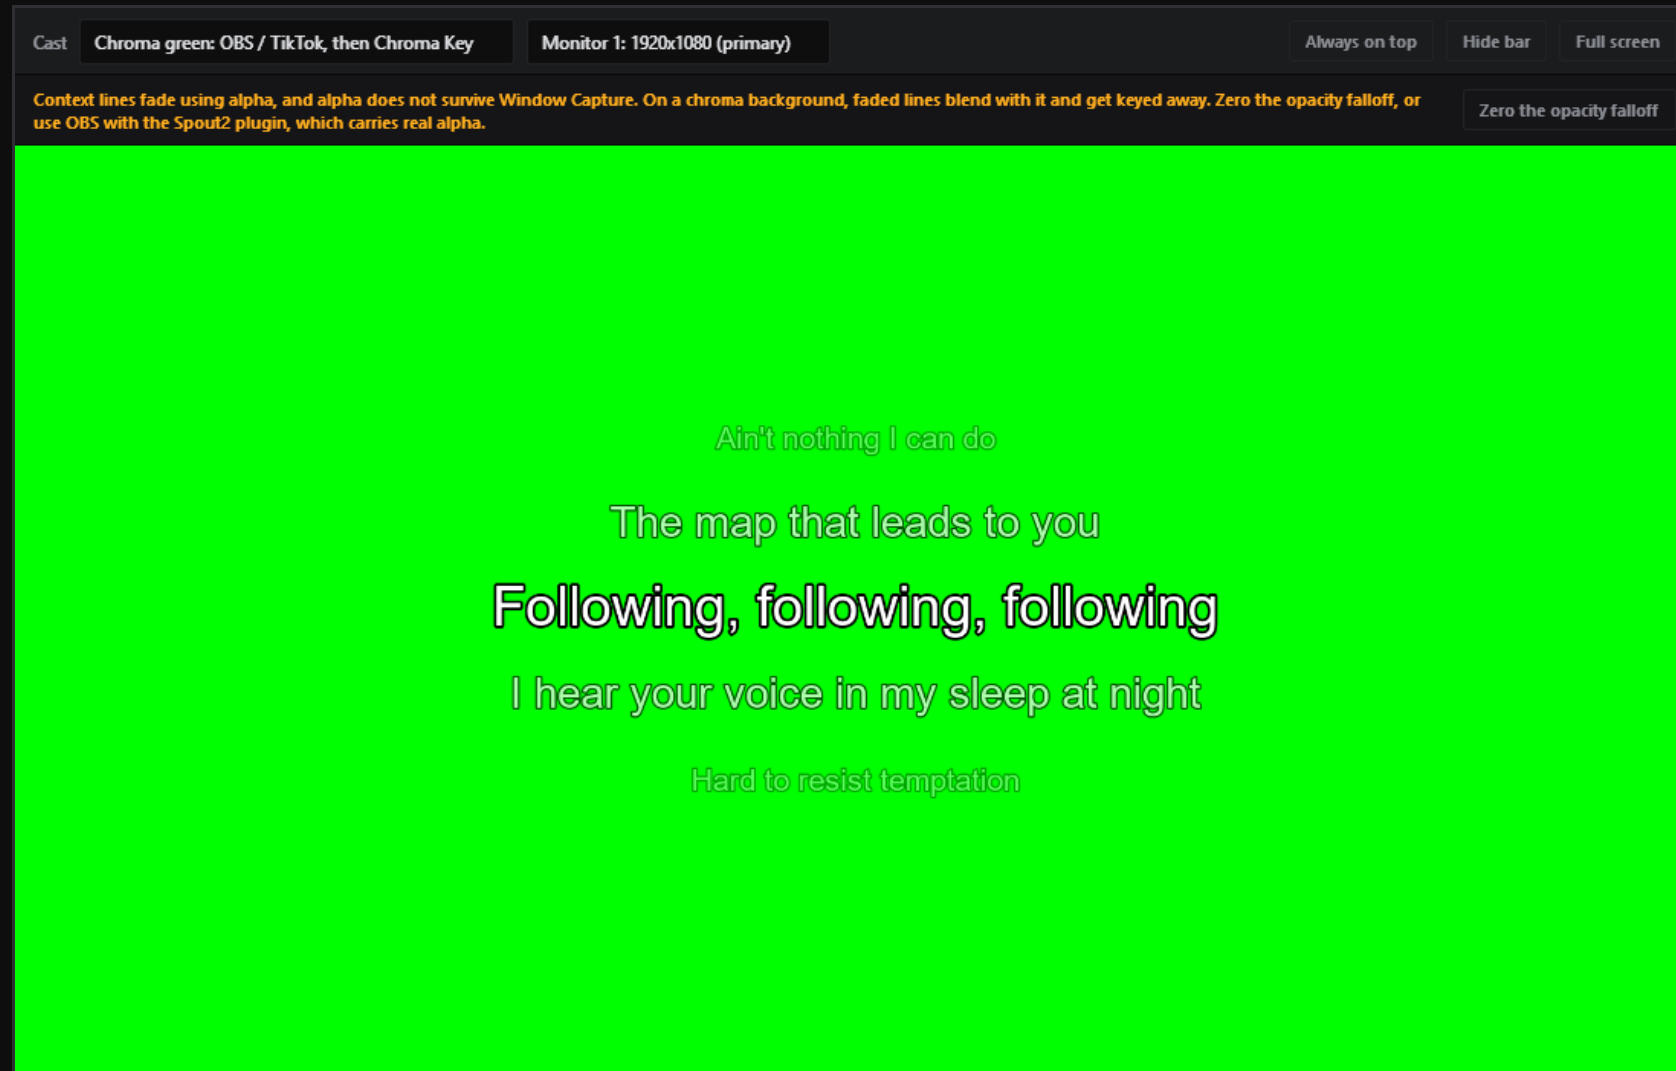

Style

Every visual parameter, live as you drag.
Right-click any control to reset it, the way
Resolume Arena behaves. Save the result
as a template.

Cast: OBS, TikTok Live, second screen

08

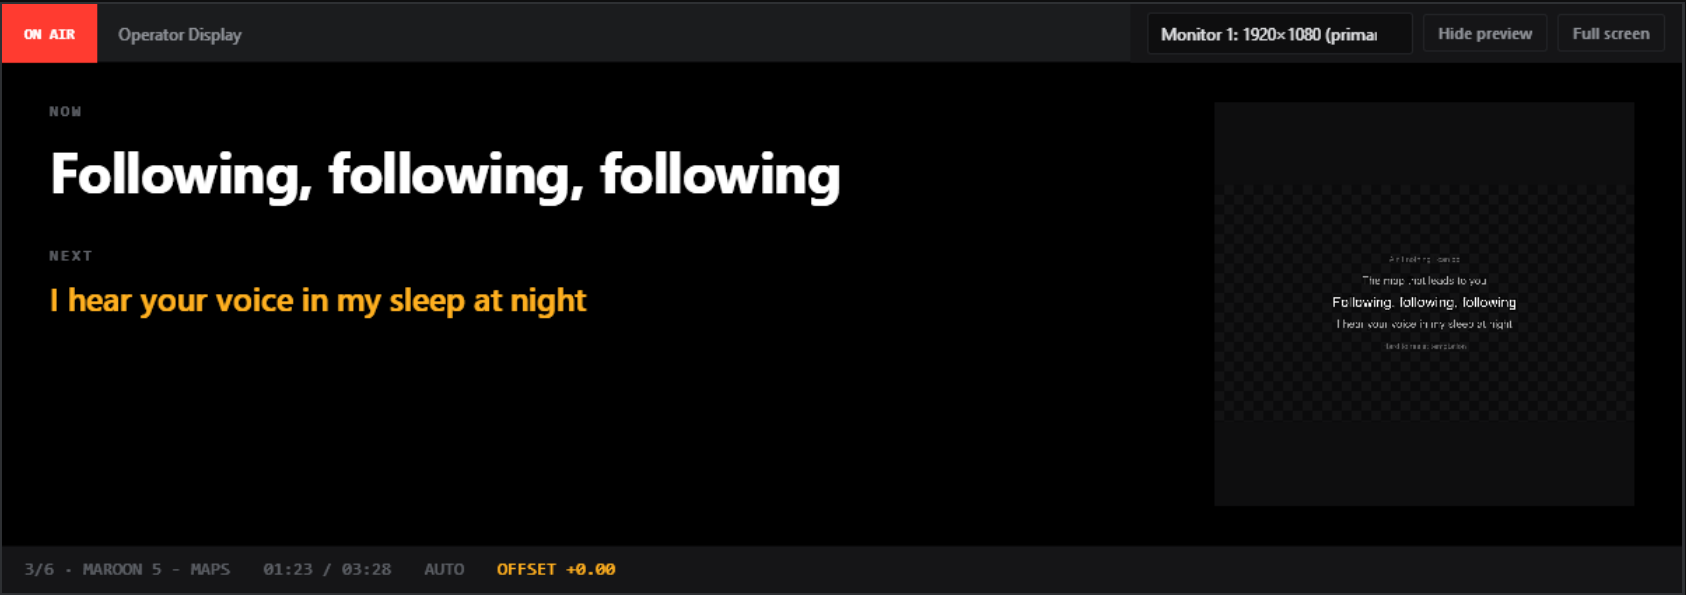

Cast: OBS, TikTok Live, second screen

One window covers all three, because all three want the same thing: something capturable. Note the warning: alpha does not survive Window Capture, so the app detects it and offers the fix.

Operator Display

NOW and NEXT on a second monitor, for whoever is calling the show. Position, elapsed time, mode, and sync offset along the bottom.

29.7 fps

worst case, 1920x1080

Lines changing every 0.6s so the frame cache never helps

26.0 ms

per frame, median

Against a 33.3 ms budget for 30 fps.
22% headroom

9.3 ms

outline render, was 137 ms

Brute-force outline replaced with Pillow
stroke_width

18 to 40 ms

style change to on-screen

Style swaps without stopping the output

Every number here came from running the thing on Windows 11 with Resolume open. The full test transcripts are in SRS.md.

What it does not do

11

Stated up front, because finding out during a show is worse.

No audio analysis

Sync is manual. This is a design decision, not a missing feature.

Spout is Windows only

The rest of the app runs anywhere, but output does not.

OSC and MIDI are untested on hardware

The code is there and it is documented as unverified. If you have a controller, please open an issue.

Not code signed

Windows SmartScreen will warn on first run. The source is public so you can build it yourself.
